Professional Experience

Concepts & Prototype Systems Engineer @ Lucid Motors *November 2024 - Present*

- Design, build, integrate and validate various electrical and software subsystems for upcoming prototype vehicles, show cars, and proof of concepts (e.g. Lunar, Cosmos)
- Spearhead and build control schema for all human interactions on various bucks and vehicle systems with Python, Arduino C, Protopie, and quick iterative hardware design.
- Create electrical wiring diagramming and documentation within Design Studio Team.

Product & Systems Engineer @ FarmWise *August 2022 - November 2024*

- Lead engineering teams on prioritizing and defining the Vulcan smart weeder roadmap and product features to bring maximum value to customers and shareholders.
- Compose and maintain the Vulcan operator's manual and internal technical training documentation leveraging deep technical knowledge of the Vulcan system for safety.

Hardware QA Engineer @ FarmWise *Promoted December 2023*

- Design and execute all comprehensive electrical, mechanical, and hydraulic test cases for the full life cycle of the Vulcan smart weeding robot from the ground up.
- Automate analysis of field and lab test data utilizing Python data visualization libraries to efficiently provide constructed metrics for leadership and cross functional teams.
- Create and build test fixtures for third party contract manufacturers assembling and testing Intelligent Plant Scanners, hydraulic actuators, & mechanical frame assemblies.

Audio Test Engineer @ Zoom *August 2020 - September 2021*

- Define audio test cases for Zoom's hardware certification programs for key market leaders and own over 100 hardware device certifications with product partners.
- Automate Python testing of over 24,000 audio test cases integrating Jenkins deployment to enable a remote lab setup for a cross functional team.
- Perform root cause analysis and trend trackings on advanced audio issues.

Systems Engineer I @ BAE Systems *January 2020 - May 2020*

- Analyze sensitive data from field reports on combat vehicles and diagnose fault codes using simulations utilizing hardware in line (HIL) testing in a lab setting.
- Model and simulate electrical system components using proprietary software and build wire diagrams for electrical hardware connections on various combat vehicles.

Electrical Engineering Technician @ Fitbit *January 2019 - January 2020*

- Certify and execute over 50 electrical hardware tests suites for Versa 2, Versa, Inspire, and Inspire HR wearable products in electrical and mechanical laboratory settings.
- Automate test suites using Python to extract metrics from user released data, providing insights into iterative audio hardware design on prototypes.
- Assist Versa 2 & 3 microphone port acoustic testing using state of the art audio equipment while analyzing audio and mechanical data with Python and Matlab.

Education

MSEE @ SJSU

Double Focus in Machine Learning and Power Electronics

January 2019 - June 2022

BSEE @ UCSD

Focus in Machine Learning and Controls, Minor in Business Studies

August 2014 - May 2018

Skills

Hardware

- Rapid Prototyping - 3D printing, CAD, laser cutting, machine shop
- Electrical Lab Equipment and Tools
- Bare Metal Testing and Analysis

Software

- Arduino C, Python, Matlab
- Scripting, Data Visualization, Automation, version control
- Automotive networking - CAN, LIN
