Professional Experience

Prototypes and Concepts Systems Engineer @ Lucid Motors *November 2024 - Present*

- Lead O-1 electrical and software system architectures for upcoming prototype vehicles, show cars, special projects, and proof of concepts (e.g. Lunar, Cosmos, Earth).
- Define and integrate control schema for all human interactions on various bucks and vehicle systems with Python, Arduino C, Protopie, and quick iterative hardware design.
- Engineer lab bench validation setup for rapid iterations on experiments and solutions.
- Author system documentation for easy use between UX, Engineering, & Product teams

Product & Systems Engineer @ FarmWise *August 2022 - November 2024*

- Lead engineering teams on prioritizing and defining the Vulcan smart weeder roadmap and product features to bring maximum value to customers and shareholders.
- Compose and maintain the Vulcan operator's manual and internal technical training documentation leveraging deep technical knowledge of the Vulcan system for safety.

Hardware QA Engineer @ FarmWise *Promoted December 2023*

- Design and execute comprehensive electrical, mechanical, and hydraulic experiments for the full life cycle of the Vulcan smart weeding robot and Intelligent Plant Scanner box.
- Automate analysis of field and lab test data utilizing Python data visualization libraries to efficiently provide constructed metrics for cross functional teams to reduce MTBF.
- Create and deploy test fixtures for third party contract manufacturers assembling and validating production intent Intelligent Plant Scanners and hydraulic actuators.

Audio Test Engineer @ Zoom *August 2020 - September 2021*

- Define audio test cases for Zoom's hardware certification programs for key market leaders and own over 100 hardware device certifications with product partners.
- Develop automated Python testing of over 24,000 audio test cases to evaluate new client feature effects on signal quality with VISQOL and ITU-T standard signals.
- Perform root cause analysis and trend tracking on advanced audio issues.

Systems Engineer I @ BAE Systems *January 2020 - May 2020*

- Analyze sensitive data from field reports on combat vehicles and diagnose fault codes using simulations utilizing hardware in line (HIL) testing in a lab setting.
- Model and simulate electrical system components using proprietary software and build wire diagrams for electrical hardware connections on various combat vehicles.

Electrical Engineering Technician @ Fitbit *January 2019 - January 2020*

- Test over 50 electrical hardware tests suites for prototype Versa 2, Versa, Inspire, and Inspire HR wearable products in electrical and mechanical laboratory settings.
- Automate test suites using Python to extract metrics from user released data, providing insights into iterative audio hardware design on prototypes.
- Conduct mass market Versa 2 & 3 microphone port acoustic validation, utilizing MATLAB and Python to analyze sensor and acoustic data.

Education

MSEE @ SJSU

Double Focus in Machine Learning and Power Electronics

January 2019 - June 2022

BSEE @ UCSD

Focus in Machine Learning and Controls, Minor in Business Studies

August 2014 - May 2018

Skills

Systems & Architecture : O-1 Architecture Design, System Bring-up, Rapid Prototyping

EE Focuses: Power Electronics, Analog/Digital/Mixed Signal, Digital Signal Processing

Software & Firmware: Arduino C, Python, MATLAB, Low-level Scripting
